

Project Profile

Project: New York Road Tunnel, A64 Leeds City Centre Inner Ring Road

Client: Leeds City Council

New York Road Tunnel carries the A64 Inner Ring Road out of Leeds City Centre towards York.

A section of the tunnel had been propped and partially closed to traffic for some time due to fears that the bearings that supported the tunnel roof beams were in a poor state of repair. Leeds City Council put the tunnel repair scheme out to tender in 2007 and **APA Concrete Repairs Ltd** were successful in winning the subcontract package for the full project.

The works involved mosaic tile removal, hydro-demolition, concrete repairs, phased bearing shelf replacement and the installation of an Impressed Current Cathodic Protection System that had been designed by the Council's Consulting Engineers.

Over 2500m² of 'mesh and overlay' type Cathodic Protection was installed working nights and weekends throughout the winter of 2007-08.
